//note="Organ: Stoned: Vector: pT218RP1; Site 1: ECORI;
Site 2: Not1; The poly (A)+ RNA was dephosphorylated with
bacterial alkaline phosphatase (BAP) and then decapped
with tabacco acid pyrophosphatase (TAP). The decapped
with tabacco acid pyrophosphatase (TAP). The decapped
intact manA was ligated with DNA-RNA linker including EcoR
I site by treatment of T4 RNA ligase and the first strand
cDNA was synthesized from oligo dT-selected mRNA by
priming with dT-tailed vector. The dT-tailed vector was
adjusted to have about Gont. The cDNA vector was
circularized with E. coli DNA ligase after digestion of
EcoRI which site is also included in vector. An RNA strand
converted to a DNA strand by Okayama-Berg method. The
obtained cDNA vectors were used for transformation of
competent cells E. coli ToplOf' by electroporation method.
The cDNA libraries constructed by this method are
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  EST 25-JUN-2003
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               121 GGAAAAGCTCCTAAGCTCCTGATCTATGTTGCATCCAGTTTGCAAAGTGGGGTCCCATCA 180

Screening an antibody using 2-D electrophoresis on plural proteins in samples for separating individual protein spots to react with an antibody library useful in proteomics and other biological sciences. Disclosure; Fig 1; 78pp; Japanese.

The invention relates to a novel method for screening an antibody, comprising performing 2-D electrophoresis on plural proteins in a sample. Individual protein spots are separated by reacting them with an antibody library and then replicating the bound antibodies before reacting them with the spot proteins again. The method is useful for screening an antibody specific for a target protein, e.g. from a phage antibody library, which is useful in proteomics for studying various protein and complementary decayribonucleic acid (cDNA) expression libraries as well as gene functions, and in other biological and medical sciences. The invention relates to a method of inhibiting tumour growth which involves administering, vascular endothelial growth factor receptor (VEGER) antagonists in combination with radiation, chemotherapeutic gaput, or epidermal growth factor receptor (EGER) antagonist. The method is useful for inhibiting tumour growth in a human, where the tumour (e.g. tumour of the breast, heart, lung, small intestine, colon, spleen, bone, kidney, bladder, heart lung, small intestine, colon, spleen, bone marrow, blood, thymus, uterus, testicles, cervix or liver) over expresses VEGER; it is also useful for inhibiting growth of colon tumour or non-small cell lung carcinoma (NSCLC) and tumour overexpressing EGER.

It is preferably useful for treating subjects with both solid tumours, progression of tumour growth includes prevention or inhibition of the progression of tumour including cancerous and non-cancerous tumours, where the progression of tumours includes the invasiveness, metastasis, recurrence and increase in size of the tumour. The present sequence is human KDR (VEGER-2) Fab antibody heavy chain DNA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 240

The invention relates to a method of inhibiting tumour growth comprising administering to a human a vascular endothelial growth factor receptor vyGFRP, antagonist and epidermal growth factor receptor (BGFR) antagonist. The method is useful for inhibiting tumour growth. The present sequence is used in the exemplification of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           1 chestechectestechercressesses cristre has consessed to consessed to chesteches and consessed to cheste the consessed to 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          TCCTGCGCAGCCTCCGGGTTCAGGTTCACTTCAATAACTACTACATGGACTGGGTCCGC

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The invention relates to a novel antibody having a first antigen binding site specific for a first vascular endothelial growth factor (VBGP) receptor and a second antigen-binding site specific for a second VBGF receptor. The bispecific antigen-binding proteins block activation of the VBGF receptor and are useful for reducing or inhibiting VBGF-induced cellular functions such as mitogenesis of vascular endothelial cells and migration of leuksemia cells. The antibodies are useful for treating tumours and for in vivo or in vitro for investigative and diagnostic methods. This polynuclaotide sequence represents a human DNA sequence relating to the bispecific antibodies that bind to the VBGF receptors of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              New bispecific antibodies having antigen-binding sites specific for a first vascular endothelial growth factor (VEGF) receptor and for a second VEGF receptor, useful for inhibiting migration of leukemia cells, or for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               180

An antibody of the invention has cytostatic activity, and may have a use in gene therapy. The antibody is anti-KDR antibody. The antibody is useful for preparing a composition for reducing tumour growth and inhibiting anglogenesis. The present sequence is used in the exemplification of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               TCCTGCGCAGCCTCCGGGTTCAGGTTCACTTCAATAACTACAAGGACTGGGTCCGC 120

The invention relates to a method of inhibiting tumour growth which involves administering, vascular endothelial growth factor receptor (VBGFR) antagonists in combination with radiation, chemotherapeutic agent, or epidermal growth factor receptor (BGFR) antagonist. The method is useful for inhibiting tumour growth in a human, where the tumour (e.g. tumour of the breast, heart, lung, small intestine, colon, spleen, bone, kidney, bladder, head and neck, overy, prostate, brain, pancreas, skin, bone marrow, blood, thymus, uterus, testicles, cervix or liver) over cyprosesses VBGFR. It is also useful for inhibiting growth of colon tumour or non-small cell lung carcinoma (NSCLC) and tumour overexpressing BGFR. It is preferably useful for treating subjects with both solid tumours, preferably useful for treating subjects with both solid tumours, reduction of tumour growth includes prevention or inhibition of the progression of tumour includes prevention or inhibition of the progression of tumours includes the invasiveness, metastasis, recurrence and increase in size of the tumour. The present sequence is human KDR (VBGFR-2) Fab antibody heavy chain DNA Human; tumour; vascular endothelial growth factor receptor; metastasis; epidermal growth factor receptor; non-small cell lung carcinoma; NSCLC; breast; VEGFR; heart; EGFR; therapy; invasiveness; heavy chain; gene; VH; Inhibiting tumor growth in humans involves administering vascular endothelial growth factor receptor antagonists in combination with radiation, chemotherapeutic agents, or epidermal growth factor receptor /*tag= a /product= "Human KDR (VEGFR-2) Fab heavy chain (VH) protein" /note= "CDS does not include start and stop codon" Human KDR (VEGFR-2) Fab heavy chain (VH) DNA from D1H4 clone. New bispecific antibodies having antigen-binding sites specific for a first vascular endothelial growth factor (VEGP) receptor and for a second VEGF receptor, useful for inhibiting migration of leukemia cells, or for treating tumors. The invention relates to a novel antibody having a first antigen binding site specific for a first vascular endothelial growth factor (VBGF) receptor and a second antigen-binding site specific for a second VBGF receptor. The bispecific antigen-binding proteins block activation of the VBGF receptor and are seful for reducing or inhibiting VBGF-induced cellular functions such as mitogenesis of vascular endothelial cells and migration of leukaemia cells. The antibodies are useful for treating 300 TCCTGCGCAGCCTCCGGGTTCAGGTTCACCTCAATAACTACTACATGGACTGGGTCCGC 120 114 121 CAGGCTCCAGGGCAGGGGCTGGAGTGGGTCTCACGTATTAGTAGTAGTGGTGATCCCACA 180 174 240 234 crerarcrecaargaacaeccreagaeccgaegacacacecrererarracrerecaaga 294 9 9 mitogenesis; CAGGCTCCAGGGAAGGGGCTGGAGTGGGTCTCATTAGTAGTAGTAGTAGTAGTACATA TACTACGCAGACTCAGTGAAGGGCCGATTCACCATCTCCAGAGACAACGCCAAGAACTCA CTGTTTCTTCAAATGAACAGCCTGAGAGCTGAGGACACGGCTGTCTATTACTGTGCGAGC 61 recrerecadecrere----earreacerreagracranacardaacresecee TGGTACGCAGACTCCGTGAAGGCAGATTCACCATCTCCAGAGAACGCCAACAACACA rescharecoreseggiccoreagactic Gaps 295 GICACAGATGCTTTTGATATCTGGGGCCAAGGGACAATGGTCACCGTCTC 344 TTGACTACAGGGTCTGACTCCTGGGGGCCAGGGAGTCCTGGTCACCGTCTC 350 9 Cytostatic; antibody; antigen binding site; VEGF receptor; m leukaemia cell; vascular endothelial growth factor; tumour; bispecific antigen-binding protein; human; gene; ds. The method is useful for inhibiting tumour growth. The present sequence is used in the exemplification of the invention.
                                                                                                                                                                                                                                                                                                                                                                  60

                                                                                                                                                                                                             The invention relates to a novel isolated human antibody or its fragment binds selectively to KDR. An antibody of the invention has cytostatic activity, and may have a use in gene therapy. The antibody is anti-KDR antibody. The antibody is useful for preparing a composition for reducing tumour growth and inhibiting anglogenesis. The present sequence is used in the exemplification of the invention.

involves administering, vascular endothelial growth factor receptor (VEGER) antagonists in combination with radiation, chemotherapeutic agent to repidermal growth factor receptor (EGER) antagonist. The method is useful for inhibiting tumour growth in a human, where the tumour (e.g. tumour of the breast, heart, lung, small intestine, colon, spleen, bone, kidney, bladder, heard and neck, ovary, prostate, brain, pancreas, skin, bone marrow, blood, thymus, uterus, testicles, cervix or liver) over expresses vEGER: It is also useful for inhibiting growth of colon tumour or non-small cell lung carcinoma (NSCLC) and tumour overexpressing EGFR. It is preferably useful for treating subjects with both solid tumours, preferably useful for treating subjects with both solid tumours, or reduction of tumour growth includes prevention or inhibition of the progression of tumour including cancerous and non-cancerous tumours, where the progression of tumour includes the invasiveness, metastasis, recurrence and increase in size of the tumour. The present sequence is tumour CDE and in DNA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        TCCTGCGCAGCCTCCGGGTTCACCTTCAATAACTACTACATGGACTGGGTCCGC 120

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        114
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         180
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             234
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The invention relates to a novel antibody having a first antigen binding site specific for a first vascular endothelial growth factor (WEGF) receptor and a second antigen-binding site specific for a second vEGF receptor. The bispecific antigen-binding proteins block activation of the WEGF receptor and are useful for reducing or inhibiting VEGF-induced cellular functions such as mitogenesis of vascular endothelial cells and migration of leuksemia cells. The antibodies are useful for tracting tumours and for in vivo or in vitro for investigative and diagnostic methods. This polynucleotide sequence represents a human DNA sequence relating to the bispecific antibodies that bind to the VEGF receptors of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          9
